

VERMITERRA FINE

EXFOLIATED VERMICULITE

SEEDLINGS AMPLIFIER – SUBSTRATE TEMPERATURE STABILIZER

Product Description : Vermiculite is a hydrous phyllosilicate mineral, which belongs in the group of clays and specifically in crystalline clays with lamellar structure. Its characteristic is that it contains trapped water between its layers. It looks like mica. The interlayered water evaporates at a temperature of 900°C, resulting in the expansion (exfoliation) of the mineral up to 30 times compared to its original volume. The exfoliation turns the fine flakes of the mineral into lightweight, accordion-like porous granules containing numerous layers of air.

Advantages :

- Does not rot
- Doesn't mold, it is time enduring
- It is odorless and non-toxic
- It has a controlled pH
- It is sterile from pathogens

Usage :

- Seedlings production
- Soil improver
- Organic agriculture
- Hydroponics
- Horticultural and floricultural plants
- Vegetables farming
- Vines cultivation
- Mushrooms cultivation

Technical Features :	Grain size :	Exfoliated grain nominal size, 0.5 – 3 mm	
		Grain distribution, 60 – 70% > 1.5 mm	
	Dry apparent weight :	100 - 125 kg/m ³	(EN 13040)
	pH:	8.2 ± 1%	(EN 13037) 1:5 v/v sample/deionized water
	Electrical conductivity in extract :	45 - 55 µS/cm	(EN 13038) 1:5 v/v sample/deionized water
	Water Holding capacity :	480 - 500 ml H ₂ O /100 g δείγματος	(Methods of analysis for soils)
	Cation exchange capacity:	52 meq Na /100g	(Methods of soil chemical analyses)
Typical chemical analysis:			
	SiO ₂	34 - 43%	Fe ₂ O ₃ 5 - 13%
	MgO	10 - 15%	K ₂ O 2 - 4%
	Al ₂ O ₃	7 - 15%	CaO 3 - 8 %
Heavy metals:			
	Cd	≤ 1.5 mg/kg	Ni ≤ 100 mg/kg
	Cr VI	≤ 2 mg/kg	Pb ≤ 120 mg/kg
	Hg	≤ 1 mg/kg	As ≤ 40 mg/kg

No radioactivity or asbestos is detected in the material.

Packaging : Bags of 100lt in pallet of 30 bags
